THE SIR MINISTRY PERRINARY & INTE

## REPORTS FROM MINING CAMPS.

DEVELOPMENT IN THE TWO BIG COPPER FIELDS.

Good Showing of the Wild Goose Company of Nome Gives Assurance of the Dis telet's Value-Cripple Creek's Tunnel Richness of Ore in the Tonopah Field.

bolders seem satisfied with their last semi-annual dividend of \$2.50 n share, which is about the net earnings of the mine for the last half of 1902. The better price of copper now ruling will help the company's strongbox, and certain improvements, notably the introduction of electric transming throughout the mine, will further reduce costs.

The Phonix mill is nearing completion and should go into commission within a short time. The sixth and seventh levels of the West Vein mine of the Phoenix are showing some of the best copper ground ed in Keweenaw county.

The Mass mine is securing a monthly production of 150 to 175 tons of mineral, about 40 per cent, of which comes in the shape of copper. It is said that the mine is more than making expenses, though from the nature of things it will be impossible to earn any large profits with copper at 1214 cents until the production is materially creased, and the mill cannot be run to its full capacity with advantage until the mine openings are more extensive than at present. The Michigan management is examining mill sites, and will soon make a choice, as milling facilities will be needed by the time that the reduction plant can be erected and equipped, this work requiring eighteen The branch vein of the Michigan continues to show the greatest amount of copper found in any mine opening

It is asserted that the Isle Royale is earning money from the output of its single stamp. While this is surprising, with a single head working on such low-grade rock, the Isie Royale has an exceptionally complete and conomical plant, and its mine management is very careful and saving. Diamond drill ns on the southern end of the Isle Roya's tract have not yet located the Baltic lode, and despite the work done by the Isle Royale and on Section 16 by the Atlantic ompany, the northern continuation of the great Baltic amygdaloid remains as great mystery as ever

from the Allouez. This property carries the underlay of the Mohawk mine. At the Ahmeek, development work is being continued, and the property is likely to develop into a good mine within the next few years.

MONTANA. BUTTE, Jan. 25 .- The output of precious in Montana exceeds the production stones in Montana exceeds the production of all the rest of the United States. The Yogo sapphire mines in Fergus county, thirteen miles west of the town of Utica. thirteen miles west of the town of Utica, are an illustration of the good luck which sometimes occurs in mining. In 1895 a placer conpany was organized to work the gold-bearing gravels found in pockets upon the limestone bench land of the Judith River. A dich costing \$38,000 was built and the watch of Yogo Creek were carried upon the bench land with a head of 300 or 400 feet. The first season's work demonstrated that the gravel would not pay as gold placer, as a clean up of only \$700 was made after a season's work. The stuice boxes, however, centained a large number of blue stones, which were identified as sapphires and it is said that a cikar box full of the gems coltected at this time were sold to Tiffany & Co for \$3,700. It is now known that the gems occur in a dike of trap rock cutting white and gray limestone. This dike has been traced for a distance of five miles and the entire known extent of the dike has been located as a lode and a large number of claims have been patented. The method of extracting the sapphires is much similar to that used by placer miners in sluicing for gold. The sluice boxes are fitted with Hungarian riffies, as in placer mining, but it is necessary to exercise more care in setting them, as the specific gravity of the sapphire is much less than that of gold, and with the boxes set at too great a pitch the gems would pass over the riffies and be lost.

The stones of the Yogo vein vary in size from the smallest to four or five carets, and as gems they equal in value the best products of the mines of Ceyion and Burmah. The largest stone yet found in the American Jem Company's mines was taken from the New Syndicate mines weighed a little more than nine carats. The stones are very equally distributed throughout the vein, but are less broken and somewhat better formed are an illustration of the good luck which

a fight both which we we was in spite of the set of the least two weeks in spite of the set of the last two weeks in spite of the set of the se

it is said that United States Steel Company of men are interested.

If pay ore is not encountered within a week, the Copperopolis mine at Copperopolis will be closed down. This is the ultimatum of the Daly estate. This mine, which produced such rich copper ore at the start has proved unfruitful for nearly eighteen months, despite the fact that a large force of men was employed in development work. The limit has been set, and if ore is not encountered, the machinery will be taken up and the property abandoned.

The Snowshoe mine, in the Libby district, is the scene of another rich strike At the 200-foot level, ore assaying as high as \$45 a ton in gold was found. The ledge is five feet wide and there are two feet of clean shipping ore. As the ore can be treated at a cost of about \$25 a ton, a handsome margin is obtained. The Snowshoe company's report shows that the property was operated at a profit of more than \$40,000 last year, despite the fact that all ore treated was that encountered in development work. The new strike would indicate the permanency of the property, as the gold value has invariably increased with depth. It is planned to build an electric read to connect with the Great

Northern, which would greatly reduce the cost of treatment, the ore at present being haveled in wagons to the railroad.

An old prospector named Hannan, who has been prospecting on the west fork of the litter Root for many years, has at last realized his dream. In one of his prospect holes on that stream, he encountered a large body of copper and lead ore. While no assay has been made as yet, the ore is apparently quite rich, judging from the samples exhibited.

LAKE REGION IRON MINES.

DULUTH, Minn., Jan. 28—J. J. Hill and associates have bought a three-fifths interest in the leases of the Fay Exploration Compuny at Hibbing, comprising the Winnifred and Laura mines. These mines have been developed for the Hills and are under contract to ship over the Great Northern road. They are mining heavily this winter and the Laura is shipping all its product to furnaces at Duluth and Spring Valley, Wis. The trice paid for the interest was \$160,000 Mr. Hill's son, L. W., has been made president of the company.

The United States Sizel Corporation is exploring on the northwest quarter of section 14 62-14, and is said to have found hard high-grade ore there. This work has been under way for some months. In the same township the company is exploring the Sheridan, which was opened by it some years ago and on which there is supposed to be ore. Exporations are conducted by others in the same region and with some measure of success. Exploring in this district is very expensive and slow, and few companies have the cash or nerve to undertake it. But the rewards, when ore is found, are great, as the ore is of a character root usually found and in sharp demand by all Bassemer steel makers. The mines of the Duluth syndicate that his been exploring for some years at North Freedom, Wis., are now beginning to make a sacwing of value, and a shaft is being sunk. It is in ora of good grade and at considerable depth a large body is being cut. The Deering Harvester Company, the Unions Steel Company and other interests are at work now in the

The Hawkins mine of the Deering Har-ing company on the Mesaba range is be-ing developed this winter for a considerable product another year, though it is not prob-able that more than 150,000 tons will be shipped in 1903. The Agnew mine of the same company will ship about the same

shipped in 1903. The Agnew mine of the same company will ship about the same amount.

Railroad lines owned by the Cleveland Cliffs Iron Company now reach from the company's mines near Marquette to the lake, and for 150 miles easterly, through immense belts of hard wood forests suitable for charcoal making, and containing wood enough to make charcoal to last furnaces fifty years. These lines are only a few miles from a deep-water port on the northwest side of Lake Michigan, where quick and short deep-water communication can be had with the company's recent land purchases at Toledo. Though the Cleveland Cliffs Company denies that this land is bought for a site for steel making, there is little doubt in the minds of mining men that it is so designed and that the next move of the great Cleveland company will be to creet steel making plants on the shores of Lake Erie. The company is better able to go into steel making than 120 other concern independent of the United b. ates Steel Corporation.

M. A. Hanna & Co. of Cleveland are working this winter with a large force in the eastern Vermillion range on the Canadian side of the boundary, where there are indications of the ore-bearing formation. They will explore extensively there the coming season. This district is a new field, and lies between the Canadian Atlkokan district and the Thunder Bay region.

Some ore is being found in the vicinity of the new village of Nashawauk, western Mesaba range, in addition to that opened last year for the Deerings and the Cleveland the ore is not of good grade so far as gone into.

A Carried and Section of the Control of the Control

be opened up by the road.

CALIFORNIA.

SAN FRANCISCO, Jan. 26.—A small, but rich placer field has been struck on the Colorado River, forty-five miles below Needles by liorace Phelps and several companions from Los Angeles. They found several Mexicans mining in the most primitive fashion but making good wages. When the Americans ap-

STATION & SINKING MINING PUMPS. Over 40,000 CAMERON pumps in daily actisfactory use all over the world gives tangible proof of their merit and confirms the claim for their superiority merit and confirms the claim for their superiority over all others. They are conceded to be the most durable, reliable and effective mining pumps on the market to-day, and while often imitated are never equalled. For proof, inquire of any mining engineer; for catalogue and prices, write any of our resident agents or direct to the

A. S. CAMERON STEAM PUMP WORKS,
Froil Fast 248 St. New York City, I. S. A. peared the Mexicans quit. In two weeks work Phelps and his associates washed out \$1,200, among which were several nuggets that ranged in value from \$10 to \$75. Phelps thinks the rich ground is limited in area, but his report caused so much excitement that a number of prospectors left at once for the new camp.

a number of prospectors left at once for the new camp.

Rich cinnabar has been found on the poor farm of Sonoma county near Santa Ross. The specimen is very rich in quicksilver and the ledge will probably be developed. In the adjoining county of Napa there are several paying quicksilver mines in operation.

In the main tunnel of the Hidden Treasure mine near Colfax, Placer county, a blue gravel channel 100 feet wide has been struck at a distance of 8,500 feet. The channel has been opened up 300 feet and prospects well. It is evidently an offshoot of the main mother lode of the Sierra.

Fuel oil is rapidly taking the place of wood and coai in many of the mines along the foothills of the Sierra. The Oriole mine near Angel's in Calaveras county is building a 10,000-gallon tank. Oil is cheaper than any other kind of fuel and much easier to handle.

NEVADA.

other kind of fuel and much easier to nancie.

NEVADA.

RENO, Jan. 28—In the Montana-Tonopah mine at Tonopah, at a depth of 458 feet ore has been struck which runs from \$330 to \$592 at on. This ore strongly resembles the rich ore in the Mizpah mine, as it carries values in gold from \$130 to \$241 a ton. The ore is sulphate of silver and looks exactly like the bonanza ore that was taken from the Savage and Yellow Jacket mines on the Comstock over thirty years ago.

sulphate of silver and looks exactly like the bonanza ore that was taken from the Savage and Yellow Jacket mines on the Comstock over thirty years ago.

The Tonopah Mining Company is shipping 6,000 sacks of ore every month, the proceeds of development work. The company is sending this ore out mainly to give freight to the outward bound mule teams that bring supplies to Tonopah from the nearest railway station.

The developments in all the mines owned by the Tonopah company furnish a curious commentary on the judgment of several famous mining experts who were sent to Tonopah in the early days of the camp. De Lamar was the first in the field, but his experts reported that the ledges were knife blades and would soon pinch out, and that there was nothing in the camp to repay deep working. A Humboldt county man actually had an option on the Mizpah mine for \$30,000, but his expert reported against the purchase of a property that couldn't be bought now for \$30,000,000.

The Bamberger syndicate is working over the immense heap of tailings around the site of the old De Lamar mill in Lincoln county. Though experts declared that all the gold had been extracted from these tailings except 60 cents a ton, yet out of 200 tons that have been leached in the old tanks simply by the use of water and cyanide of potassium \$2.25 in gold per ton has been realized. As there are 700,000 tons on the dump this means \$1,500,000, or more than the syndicate paid for the De Lamar mines. Meanwhile 600 men are employed in developing the old mines with such good results that it is expected the new plant will start up in ninety days. The ore found is of such fine quality that the mines are expected to be oreat producers.

In Nopah district, near Tonopah, ore which carries silver and gold worth \$276 to the ton, has been found in the Paymaster group of mines. The ledge of quartz, four feet wide, was struck at a depth of forty feet.

BOISE. Jan. 25.—The Mineral Hill. between Placerville and Pioneer, is producing better ore than ever before. The Queen of the Hills, four miles north of Pioneer, is also looking well. A Colorado company has taken hold and expects to start up the twenty-stamp mill. Near Idaho City, on Willow Creek, is a free gold quartz mine known as the Klondike, which is under bond to Col. George A. Williams who has done extensive development work during the past six months. At the surface the vein is five to six feet wide and the ore rich, and the Colonel has proved that it improves in richness with depth and also holds its width.

The Clover Leaf, in Gambrinus district, is turning out rich ore, most of the gold being contained in sulphurets. An option on this property is held by the Lucky Boy company, which intends erecting a ten-stamp mill early in the spring.

Some Papers Claim Everything.

THE SUN doesn't. It may be the best newspaper in the United States, and some folks think it is. But if it isn't it ought to be. It puts a premium on brains and pays the premium. It establishes a quarantine against mediocrity and maintains it. Its staff is the highest paid newspaper staff in the world. They are at work in every quarter of the globe and the best products of their brains are found in THE SUN.—Adv.

FOR A NEW NATIONAL HYMN. Gold Medal on Exhibition to Be Awarded

by the Cincinnett. Tiffany & Co. have on exhibition the gold nedal which the Society of the Cincinnati in Rhode Island will give to the composer of the best original tune or air adaptable to the words of the hymn "America." The

the words of the hymn "America." The medal is of pure gold; it is 2½ inches in diameter and weighs 150 penny seights.

On the obverse side is shown a copy of the society's badge, an eagle holding in its claws a wreath of laurel and on its breast an oval shield bearing a classical representation of the American Revolution, symbolized by three Roman citizens presenting a sword to Cincinnatus. Around the oval is the motto in Latin, "Fe Leaves All for the Cares of the Republic."

The competition for the medal will close on Feb. 22. The committee which will decide it will have the benefit of the professional advice of Dudley Buck and Samuel P. Warren.

STARVED THEIR CHILDREN. The Parents Arrested and Ledged in Jali

in Port Jervis. PORT JERVIS, N. Y., Feb. 1 .- Mr. and Mrs. Frank Cronk of Alexander Hill, near Deposit, N. Y., were arrested last week by ocal officers of the S. P. C. C. for starving two of their children to death and neglecting two others. The husband and mother, who are big, strong people, were lodged in jail. Officer Wheaton, in company with Overseer of the Poor W. W. Robertson, when visiting the Cronk home found the corpse of a three-year-old child on a straw mat in a cradle. The body weighed less than twenty pounds. It was literally starved to death. Another child had died on Dec. 11 of the same cause and in the same cradle. The two living children were sent to the Susquehanna Valley Home. ing two others. The husband and mother,

NOT A "PEEPING TOM." Jury Unanimously Acquits the Rev. Mr Wettlinger of the Charge.

ROME, N. Y., Feb. 1.-The Rev. Theophil Wittlinger, pastor of Trinity German Wittlinger, paster of Trinity German Lutheran Church, was last hight acquitted of the charges preferred against him by Misses Mary and Caroline Geysler of violating city ordinance No. 1, in being a disorderly person, a "Perping Tom." The jury was out thirteen minutes, taking but one vote, which was unanimous for acquittal. The court room was packed, mostly with members of Mr. Wittlinger's church, many women being present. When the verdict was announced all rushed to congratulate the accused pastor. This morning from the pulpit he thanked the members of his congregation for standing by him.
